

Dust-free discharger

TOMAL Big-Bag discharger station

TOMAL Big-Bag discharge stations are designed for use with both disposable and reusable bags. When used with disposable bags, the discharge station is equipped with a pyramid knife, when used with reusable bags it is equipped with a hatch. The Big-Bag is suspended in the frame with the aid of a lifting cross bar. The discharge funnel is matched to the bag size used.

A special rubber seal ensures minimum dust formation. A vibrator is used as a discharge aid and is controlled by the empty level indicator below the outlet. Used in conjunction with the TOMAL multi-screw feeder it permits the discharging and metering of free-flowing or poorly-flowing solids.

Advantages

- Complete systems for bag discharge and metering.
- For free-flowing or poorly-flowing solids
- Flexible modular system for customer-matched solutions
- Turnkey, tested systems
- High qualification level certified according to SS-EN ISO 9001

Features

- Modular design
- Robust construction
- Option: Lifting device with manual or electrically operated travelling crane
- Accurate Multi-screw feeder
- Option: a range of lifting gear

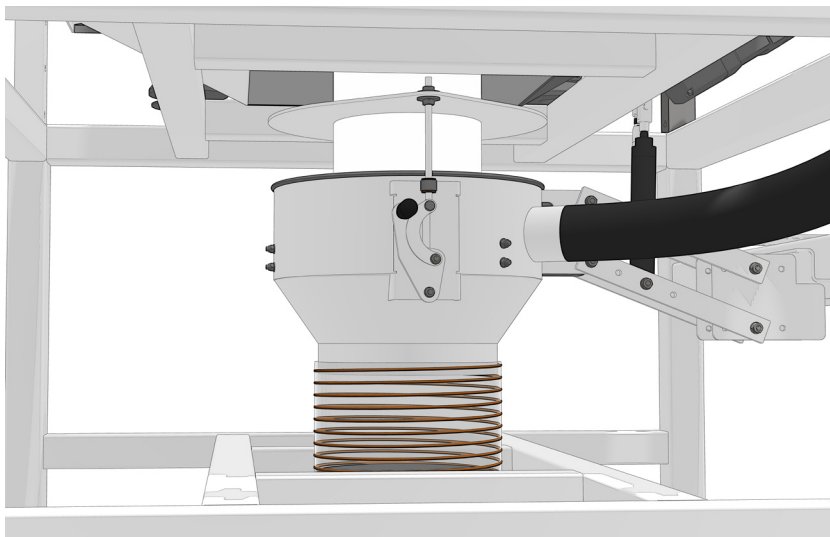

Technical Specification

Versions

- Discharge funnel for various bag sizes versions can also be supplied
- TOMALs Multi-screw feeder for safe big bag discharge and accurate metering
- Pyramid knives for disposable bag alternative Flap for use with reusable bags.
- Rubber seal for minimisation of dust creation
- Vibrator as discharge aid, controlled by the empty level signaller under the outlet

Options

- Lifting equipment comprising Lifting cross bar for forklift, alternative manual or electrical travelling crane
- Hygienic big bag bag discharger for almost dust free operation
- Dust evacuation filter
- Complete electrical system

Hygienic dust-free discharger incl evacuation hose for dust filter.
